

Research Team Project Training in NVivo Pro for Windows – 2 days Event

Introduction

This course is designed for teams. A team could consist of a number of researchers and coders from different geographical locations, working on the same project. This course will teach you how to set up a successful and a smooth-running team project.

Target audience

- Post Graduate Researcher undertaking PhD study or Masters.
- Early Career Researcher new to research, on their first teaching & research post or an independent researcher.
- Mid-Career Researcher building reputation and esteem to help establish influence and leadership.
- Expert Researcher or Research Leader, influencing research strategy and mentoring researchers of the future.

Pre-requisite

No previous knowledge of NVivo is required

Course Outline

Team projects are tailored to fit the team's needs hence the course outline will be agreed on ahead of the course to create the programme. Below is a suggested outline:

Session One

1. The tutor will facilitate the creation of the team project based on the project design framework.
2. Create data storage folders according to the project needs.
3. Import the data sources into appropriate folders.
4. Create the thematic coding framework from the project design
5. Create team memos for field notes, reflective notes
6. Code the data into both 'open codes' and the established thematic coding framework.

Session Two

1. Create cases of the sources and classify them by their demographic attributes and values.
2. Use a number of queries – coding, matrix and group queries to ask questions and gather coded references to answer them.
3. Visualise the data using maps, charts, and diagrams to explore, develop ideas,

identify patterns, find solutions, and present work graphically

4. Generate a codebook for the team.
5. Merge the group projects and examine how to manage the results of the merged or communal project.
6. Discuss the team project administration to ensure smooth merging of the on-going projects until completion.

Teaching Methods

The teaching method is mainly hands-on. It is supported by presentation, demonstration, encourage reflection, discussions, questions and answers.

The tutor will go around to examine each participant's/team project on their coding, node structure, and classification to provide suggestions, corrections and efficiency tips.

This will ensure that your coding and node structure will support in-depth data analysis.

Training Workbook

Each participant receives an instructional workbook to work through and keep.

Course Reminders

Usually the team project takes place at Client Site in an IT lab but occasionally it may take place in a classroom.

If the later, then please BRING YOUR OWN Laptop with NVivo installed and tested for working.

If you do not have NVivo installed on your laptop, you can download a 14-days FREE trial copy [from this link](#).

Practice interview data files are provided for those who have not collected data as yet. [Download it here](#).

Bring any interview transcripts you may have to work to work on.

Certificate of Completion

Each participant receives a certificate of completion.

After Training Support

All participants receive an ongoing after training support by phone, email and [Friday mornings 10-11am UK time webinar support](#).
